PROJECT CHARTER

Project Title: Smart Recommendation System
Student Name: Kishore Kora Venkatesalu

Description: Develop a system to recommend courses based on user skills, interests, and goals using machine learning.

Problem: Students struggle to find relevant learning content due to large volume of resources.

Objectives: - User profile creation - Content-based & collaborative filtering - Improve engagement

Scope: Recommendation system, UI, feedback
Out of Scope: Large-scale deployment

Deliverables: Working system, UI, backend, report

Role: Project Manager

Technologies: Python, ML, HTML, CSS, Database

Timeline: Planning (1w), Design (1w), Development (3w), Testing (1w)

Risks: Dataset issues, time limits, accuracy

Outcome: Personalized course recommendations
